View Systems Announces Joint Sales/Marketing Agreement with Xytrans

BALTIMORE, MD--(MARKET WIRE)— June 12, 2007 —View Systems, Inc. (OTC BB:[VYST.OB](#) - [News](#)), a leading homeland defense solutions provider, announced today the signing of a joint sales/marketing agreement with Xytrans Inc. enabling View Systems to market and sell the Xytrans Millimeter Wave (MMW) Imaging System. The agreement, focused on the Middle East region where View Systems has a strong established presence, is expected to make available significantly improved, more reliable and affordable people screening technology for standalone use or for incorporation into integrated security systems. The Xytrans Millimeter Wave Imaging System captures, with high resolution, natural MMW emissions in the frequencies between 80 and 100 GHz to detect concealed objects under clothing up to a twenty foot stand-off distance without any harmful radiation or invasion of privacy. The technology was developed by Xytrans, a company formed by an elite MMW engineering team that spun out of Lockheed Martin in 2001.

"We believe this is the first step in bringing the two companies' complementary skills together to better serve the security industry," said Jim Young, CEO and President of Xytrans. The two companies also announced that they are in discussion about a joint development of next generation people-screening products that will further integrate their technologies.

"We are pleased to add the Xytrans Millimeter Wave Imaging System to our extensive portfolio of people-screening products," said Gunther Than, CEO of View Systems. "The Xytrans Millimeter Wave Imaging System provides twice the sensitivity, resolution and stand-off range of competitive products available on the market today. The integration of Xytrans' technologies into our product line will increase our reach and significantly expand our target market."

About Xytrans, Inc.

Xytrans, Inc., headquartered in Orlando, FL, is a leading provider of sensors and imaging systems based on millimeter wave technology for military, homeland security and commercial markets. With more W-band sensors shipped than all other suppliers combined, Xytrans is the world leader in the commercialization of MMW technology applied to concealed object detection systems. Xytrans breakthrough innovations are captured in dozens of key patents used in both active and W-band passive MMW detection systems. For more information, please visit www.xytrans.com or contact Xytrans at 407-345-8008.

About View Systems, Inc.

View Systems, Inc., headquartered in Baltimore, MD, provides security and surveillance products to law enforcement facilities such as correctional institutions as well as to government agencies, schools, courthouses, event and sports venues, the military and commercial businesses. View Systems' headline products include the SecureScan concealed weapons detection (CWD) portal system with biometric capabilities and positive ID verification, as well the R&D 100 Award winning VFR Visual First Responder camera system which is geared toward emergency first responders.
